

MITUL BHATIA

AI Engineer | Agentic Systems | Applied LLM Systems

+91 76686 46665 | Email | Portfolio | LinkedIn | GitHub | LeetCode | Codeforces

AI engineer building agentic systems, RAG pipelines, AI guardrails, and production backends with measurable system-level outcomes.

Education

Newton School of Technology, Rishihood University

B.Tech in Artificial Intelligence

CGPA: 9.80/10.0 (through Semester 4) | Currently in Semester 5

2024 – 2028

Sonipat, Haryana

Experience

Software Developer Intern — Kolably

Jul 2026 – Sep 2026

Backend Engineering | Creator–business collaboration platform

Remote

- Built and maintained backend APIs, shipped product features, and resolved production bugs for a live creator–business collaboration platform while working directly with the founding team.
- Contributed under security and confidentiality practices for source code and customer data in an early-stage production environment.

AI Agents Lead — Raindeer.social

Jun 2026

Core AI Contributor | In-house product team

Remote

- Contributed to the AI-agent layer of a **10-agent orchestration system** using **CrewAI** and **LangGraph** to automate research, content generation, design, and scheduling workflows.
- Developed agent orchestration and pipeline logic across research, generation, and scheduling stages as part of the team building the product in-house.

AI Studio — Newton School of Technology

2025 – 2026

Competitive AI Cohort

- Selected for the college’s competitive AI Studio cohort with dedicated GPU compute; prototyped and shipped **agentic AI** and **RAG pipelines** through coursework and independent projects.

Projects

AEGIS — Multi-Agent AI Security & Guardrail Engine

GitHub | Demo

- Built an autonomous **7-agent security pipeline** that detects, exploits, patches, and validates software vulnerabilities using **FastAPI**, **LangChain**, and **Semgrep**.
- Added real-time AST policy evaluation and prompt-injection guardrails inside Docker containers, achieving **<24 ms triage latency** and **99.8% injection recall**.

Agrovers — AI-Powered Soil & Crop Intelligence Assistant

GitHub | Demo

- Built an AI assistant that converts raw soil inputs into crop and fertilizer recommendations for low-connectivity, low-literacy users using **FastAPI**, **LangChain**, and **FAISS-based RAG**.
- Added multi-stage validation, improving recommendation reliability by **35%** in internal evaluation.

FLATELY — Real-Time Roommate & Housing Matching System

GitHub | Demo

- Built a real-time housing and roommate matching application with multi-factor preference scoring using **React 19**, **Redux Toolkit**, and **Express 5**.
- Horizontally scaled WebSocket workers using **Redis Pub/Sub**, reaching **<45 ms sync latency** and **94.2% match precision**.

Technical Skills

Languages:

Python, TypeScript, JavaScript, SQL

AI / LLM:

LangGraph, LangChain, CrewAI, RAG Pipelines, LightRAG, GraphRAG, FAISS, ChromaDB, Hugging Face, Ollama

Backend / Data:

FastAPI, Node.js, Express, PostgreSQL, MongoDB, MySQL, Redis, Supabase

Infrastructure:

Docker, GitHub Actions, Git, Linux

Frontend:

Next.js, React, Redux, Tailwind CSS

Open Source & Additional Experience

- Open Source:** Hacktoberfest contributor; resolved issues and submitted reviewed pull requests under collaborative development workflows.
- Competitive Programming:** LeetCode rating 1400+; Codeforces rating 900+.
